Fig: CTENOID SCALE

CTENOID SCALE

- Ctenoid scales are the most advanced of all the scales form.
- These are derived from cycloid scales and are confiremed to spiny-rayed teleosts.
- The ctenoid scales are circular and can be distinguished from the cycloid scale by having a more or less serrated free edge.
- Several spines are present on the surface of the posterior area of the scales.
- The ctenoid scales are found in a large number of fishes with spiny-rayed fins.
- These scales grow in size as the ~~fish~~ ages.
- Examples of fish having ctenoid scales is Anabas sp.
