

Fig- Study of starch grain of rice endosperm.

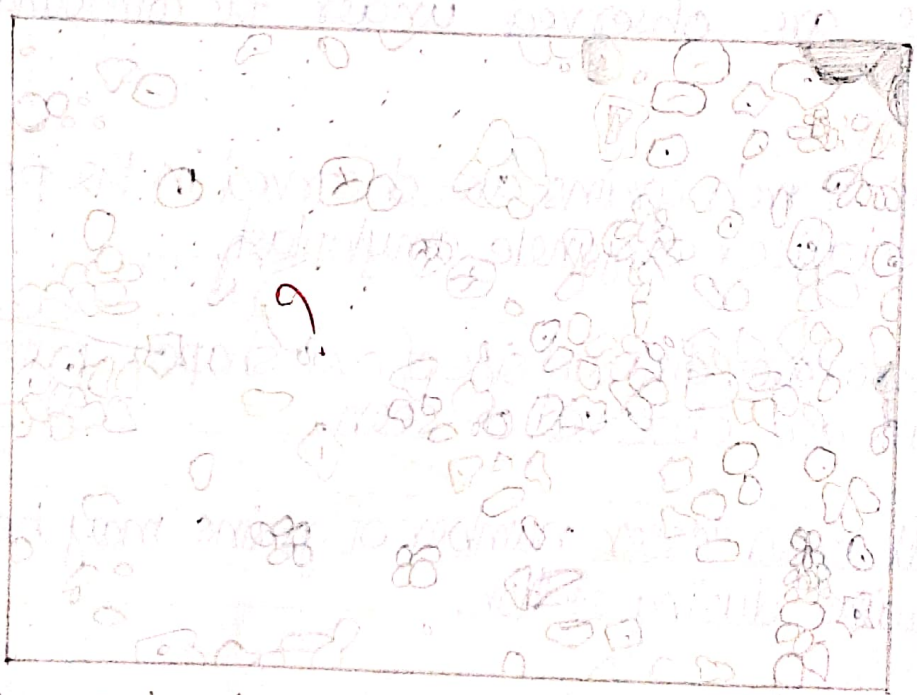

Fig- Study of starch grain of rice endosperm.

Study of starch grain of rice endosperm

Requirements:

i) milled rice ii) motor pastle iii) Slides iv) Cover slip v) 1% iodine solution vi) Bloating paper vii) Compound microscope.

Method:

i) Rice are crushed on the motor pastle.
ii) A small amount of rice flour is taken on the clean grase-free glass slide and 1% iodine solution mixed and place a cover slip on the top.
iii) Use a bloating paper to wipe out any extra iodine sblution from the slide.
iv) The slides are observed under the compound microscope.

Observation:

i) The starch grains are tend to be polyhedral shape and small in size, general 3-18 um in diametre.

ii) The grain tends to clump a groups of a few to over hundred in a ovaloid cluster.

iii) The grains are compound nature with concentric hilum.
